HOME SERVICE

Book Now on 133 600

SAVE UP TO \$325 A YEAR ON YOUR POWER BILLS WITH THE QUEENSLAND GOVERNMENT'S CLIMATESMART HOME SERVICE

For just \$50, a licensed electrician will transform your residence into a ClimateSmart home by supplying and installing a wireless power monitor. This device helps you identify where you're wasting power in and around your home and makes it easy for you to knock down your power bills by reducing your household energy consumption and power wastage.

The service also includes*:

- up to 15 free power saving light globes supplied and installed
- where suitable, a free water and energy efficient showerhead supplied and installed
- a household power assessment by a licensed electrician
- a customised Power and Water Saving Plan sent to you, and
- access to My ClimateSmart Home – a customised online resource offering more power and water saving tips and tricks.

A service like this would normally cost over \$450, however thanks to the Queensland Government, you will pay only \$50. Each ClimateSmart home saves up to 20 tonnes of greenhouse gas emissions, which is equivalent to taking more than four cars off the road for one year!

You can book a ClimateSmart Home Service by phoning 133 600 (7am-7pm, Monday to Saturday) or by going online at www.climatesmarthome.com

Tips and Hints for Householders

- Almost a third of the greenhouse gas emissions from your home come from heating water
- A clogged air conditioning filter can use five per cent more energy than a clean one, so make sure you inspect the filter on your air conditioner and clean and replace as needed
- The kitchen is, for many, the heart of the home and it takes a lot of energy to keep it in action, accounting for almost one third of the energy used in your home
- The fridge is a big energy user and roughly a third of Australian homes have two of them
- A television used for six hours a day uses enough energy to generate 200kg of greenhouse gas per year
- Many appliances have a standby mode which uses electricity to power the clock and other features – this costs you money and wastes energy
- CFLs last from 6,000 to 15,000 hours, which is 6 to 15 times longer than incandescent light bulbs and use about one-fifth of the energy

Customer Testimonials

The ClimateSmart Home Service is a great idea. I think everyone should use it. It's a great way to understand exactly how much energy you're using and to save money on your power bill.

Tina

Yeronga, Brisbane

The monitor tells us how much power we are using and lets us control our costs much more efficiently. It's a really great little tool.

Alan

Westcourt, Cairns

We got the ClimateSmart Home Service to be more aware of how much energy we were using. Having the monitor is really, really useful. Now we are saving about \$100 a quarter. I love it!

Suzanne

Annandale, Townsville

I've had the ClimateSmart Home Service for about a year and a half. Thanks to all the good advice I got from the electrician, I'm saving \$100 a year on my power bill. I'm more than happy to recommend the service to friends and family

Debbie

Woodridge, Logan

For \$50 you get a really neat little monitor that tells you how much power you are using. We have saved 100 bucks a quarter.

David

Chermside, Brisbane
