

## Programming, Documentation and Learning

At Curry Kids Early Learning Centre we understand the importance of early childhood education from an early age; this led us to develop a program committed to laying the foundations that will provide children with a wonderful start for lifelong learning.

Our program aims to promote the development of a child who has the attributes of inventiveness, curiosity, persistence, engagement, reasoning, problem solving, responsibility, imagination and creativity. The program is play based, and revolves around the children's interests and needs. Learning experiences are educationally challenging for each individual child, with the children engaging in so much fun that they will sometimes forget that they are learning. The vital contribution of early childhood education lies in developing and broadening the range of children's learning experiences to help them become confident, eager and enthusiastic learners who are looking forward to school.

The Early Year Learning Framework is used to direct planning. A copy of this curriculum document can be found at <https://education.gov.au/early-years-learning-framework>. The Early Years Learning Framework provides advice for planning, interacting with children, monitoring and assessing, and sharing information in Long Day Care contexts.

Our program has a specific emphasis on play-based learning and recognises the importance of preparing your child with the skills, knowledge and dispositions necessary to enter formal schooling with confidence and enthusiasm.
