

PUBLIC NOTICE

Mosquito Control Program

7-10 May 2025

Council wishes to advise that a mosquito control program is scheduled to begin **6:30pm today, Wednesday, 7 May 2025** continuing through to **9:30pm Saturday, 10 May 2025**.

Fogging will be carried out between 3:30am to 6:30am and 6:30pm to 9:30pm.

The program will include surface spray and thermal fogging throughout the Cloncurry town area. The aim is to fog when mosquitoes are most active, whilst also minimising contact between the public and chemicals used.

The chemical used in thermal fogging is called Phenothrin (Twilight ULV). Material Safety Data Sheets (MSDS) can be viewed by visiting Council or via the [Pacific Biologics website](#).

This product has minimal effect on residents and their pets. However, Council recommends that the following measures be taken prior and during the planned mosquito control program:

- Take time to read through the MSDS and advise Council of any concerns you may have
- Where possible, stay indoors during treatment hours
- Where practical, keep windows and doors closed during treatment hours

Council urges residents to assist in prevention of mosquito breeding by regularly removing standing water from containers, such as pot plant bases and pet drinking containers.

Beekeepers will be contacted separately to this notice.

Council apologises for any inconvenience that this may cause and appreciates your assistance during this time. Should you have any queries in respect of this matter please contact Council on 07 4742 4100.

Philip Keirle
